<title>Set Paragraph Background Color</title>
<script>
    window.onload = function() {

document.getElementById('paragraph').style.back
groundColor = 'lightblue';
    };
</script>
</head>
<body>
    <p id="paragraph">This is a paragraph with
background color set using JavaScript.</p>
</body>
</html>
```

Practical -28

Output:

This is a paragraph with background color set using
JavaScript. (including: background light blue)

```
<!DOCTYPE html>
<html>
<head>
<title>New Window with Contents</title>
<script>
    window.onload = function() {
        var newWindow = window.open("", '_blank',
'width=400,height=300');
        newWindow.document.write('<h1>New
Window Contents</h1>');
        newWindow.document.write('<p>This is some
content in the new window.</p>');
    };
</script>
</head>
<body>
</body>
</html>
```

Practical -29

Output:

New Window Contents
This is some content in the new window.

Html

 Copy code

```
<!DOCTYPE html>
<html>
<head>
<title>Resize Window</title>
<script>
    window.onload = function() {
        window.resizeBy(200, 150);
    };
</script>
</head>
<body>
</body>
</html>
```

Output:

The window is resized 200 pixels horizontally and 150 pixels vertically.
